STAHL'S

FRUIT CATALOGUE

FOR SPRING OF 1893,

ORCHARD OF ABUNDANCE PLUM TREES IN BEARING.

OF FRUIT TREES, PLANTS AND VINES

Three Hundred Acres Devoted to the Growing of Grape Vines and Small Fruit Plants.

Besides Controlling the Sale and Disposition of Nearly 1000 of Berries and Grapes for Market Purposes.

INDEXED.

Largest acreage in the United States controlled by any one party.

Largest Stock of FRUIT TREES of all Leading Varieties.

Stock warranted to be first-class in every respect.

VILLIAM STAHL, Quincy, Illinois.

NOTICE TO PURCHASERS.

Guarantee.—I warrant all my Plants, Vines and Trees to be positively true to name, with the express understanding that should any not prove so, I will return the money paid or replace it with other stock.

Strawberry Plants and Grape Vines.—I make a specialty and will quote low prices to buyers for large quantities. Have over fifty million Strawberry plants of all leading varieties for Spring planting.

Prices and Quantities.—My prices will be found upon examination to be about as low as reliable stock can be offered at. *Remember* that my Plants and Vines are about double the ordinary size and value, and must not be compared with cheap plants. I claim to pay out as much money for labor and cultivation on one acre of ground as the average nurseryman spends on five or ten acres.

Orders.—In order to avoid mistakes and delays, parties will please note their orders separate from the body of the letter and accompany them with plainly written directions, how packages are to be marked, mode of conveyance, and over what particular line or route they wish their goods forwarded. When not so stated, I forward according to the best of my judgment, but in no case do I assume any responsibility after the packages are shipped, unless for my own mistakes, and should loss by detention or otherwise occur, claims for same should at once be made upon the forwarders.

Packing.—All articles will be carefully labeled and packed in moss, with special care taken to have goods arrive in the best condition. No charge being made for boxes, packing or cartage. In all cases I pack goods in good order; take the express or railroad company's receipt for them, and then my responsibility ceases.

Remittances can be sent by express money orders, post office orders, registered letters or drafts on Chicago, St. Louis or New York. Private checks cannot be received at par, as it costs me on an average of 25 cents each to collect them.

Payments invariably in advance. Goods sent C. O. D. only when one-fourth of amount is sent with the order, with charges for returning money added to bill.

Claims, if any, must be made upon receipt of goods, when they will be carefully and cheerfully examined, and if my fault, will be settled promptly and satisfactorily. Claims made fifteen days after receipt of goods will not be entertained. I send out only good stock and well packed, but as success or failure depends in a large degree upon the care and management after received, I can not undertake to guarantee stock to live or replace that which fails.

Shipments by Mail.—All orders for Plants or Vines, at single or dozen rates, will be sent by mail, postpaid, and will arrive at destination in as good order as a letter will reach you.

Shipments by Express.—We have the American, Adams, United States and Pacific express companies, but in cases where they do not reach the desired point they transfer to other express companies. We get special rates by express, and usually ship that way unless ordered to the contrary, or small orders which will go safely by mail. Large orders can, however, be sent by freight without fear.

Varieties.—In filling orders from this list I reserve the right, in case I am out of a variety (which will occasionally occur in all nurseries), to substitute another of equal merit when it can be done (always labeling with correct name), unless the party ordering says no substituting, in which case I will fill the order so far as I can and return the balance.

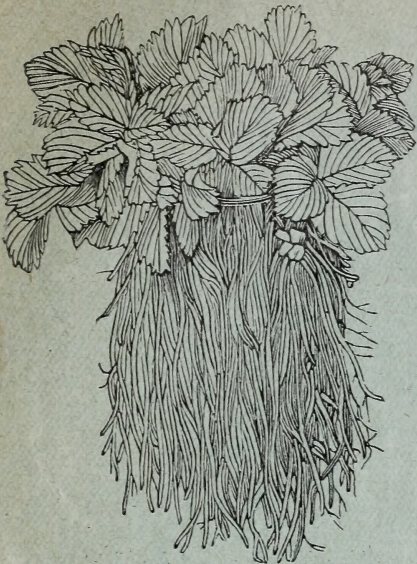

Orders.—Small orders thankfully received, but I can not undertake to fill an order for an amount less than one dollar, as the cost of recording and filling the same would exceed the amount received.

Order early as possible and address all orders and correspondence to

WILLIAM STAHL, Quincy, Ill.

Seeds.—I am often asked to recommend a thoroughly reliable seedsman. I take great pleasure in mentioning the John A. Salzer Seed Co., LaCrosse, Wis., as such. They are seed growers and can always furnish my customers with choice seeds at fair prices.

STRAWBERRIES.

If to be sent by mail, add 25 cents per 100 for postage. At dozen rates, postage free. Fifty at hundred rates; 500 or over at thousand rates. Bear in mind that my plants are double the ordinary size and value, and must not be compared with cheap plants.

Pistillate varieties are designated by a letter P, and require a staminate variety planted every third or fourth row. Full directions for planting, cultivating and properly taking care of Strawberries and all other fruits will be mailed to all parties ordering plants, vines, etc., from me this season. Space in Catalogue prevents printing the above in detail.

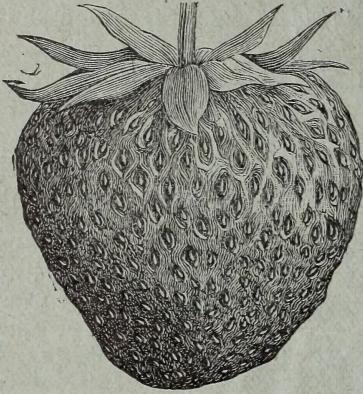

PRIDE OF THE WEST STRAWBERRY.

This new Strawberry will be placed on the market by me this season, and is without a doubt a very valuable acquisition. Originated in this State and has been tested on my grounds for the past four years with the most gratifying results. As a fertilizer for pistillate sorts it can not be beat. Resembles the Wilson variety in shape and is about double the size. A very vigorous grower and shows no signs of rust under the most favorable circumstances. Blooms a few days earlier than Crescent and continues blooming and ripens its fruit fully as long as the Crescent variety. I consider it a very valuable variety as a fertilizer, and parties planting it will not be disappointed. Price of plants for Spring, 1893: Dozen, 50c; 100, \$3.00; 1000, \$20.

LADY RUSK (P).

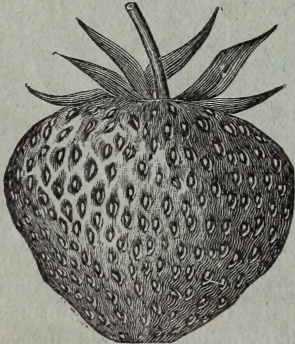

The Lady Rusk is to strawberries what the rose is to flowers. The growth of the plant is remarkable, having been put to the most severe tests and gone through the worst drouths ever known in many sections, making a good growth of plants where other varieties have died out completely under the

same unfavorable circumstances. The foliage is entirely free from rust or disease; color a bright, handsome scarlet, and of most excellent flavor. The fruit of the Lady Rusk has been shipped all over the North-western States, as far as Winnipeg, Manitoba, in perfect condition, where other varieties, picked at the same time, have melted down in transit. The nature of the fruit after standing for ten days or two weeks is to dry up, having the appearance of evaporated raspberries or blackberries, very good points in its favor during wet seasons at picking time. It does not melt down or rot like other varieties, but dries up. The fruit is of large size, several days earlier than the Crescent, and is its superior in every respect, holding size well throughout the entire picking, and, above all, one of the most productive varieties. I have placed the price of plants this season within the reach of every grower. Twelve plants by mail, 25c; 100 by express, 50c; 1000 by express, \$3.00.

CHARLES DOWNING.

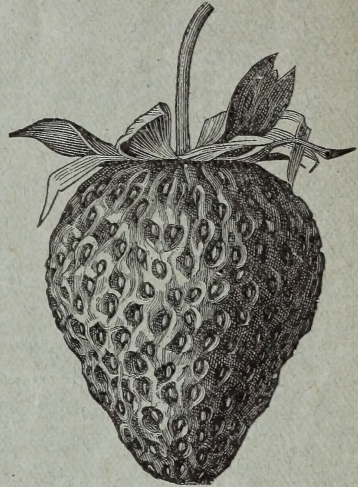

Plant vigorous and productive; will produce a good crop on all soils and locations. Fruit large, conical, scarlet, firm, juicy, sweet

and rich; a very valuable and well known variety, especially in the west. Dozen, 25c; 100, 50c; 1000, \$3.00.

BIDWELL.

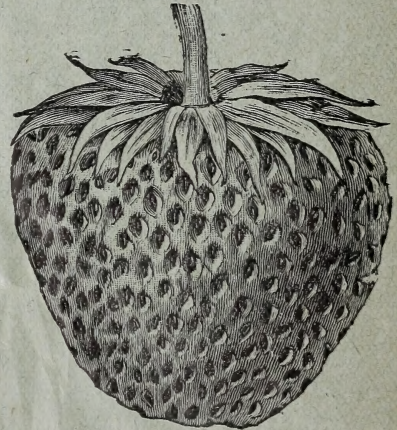

This variety seems to combine more desirable qualities than any other old sort now before the public. The plant is a very strong grower, very hardy and exceedingly productive, the fruit is very large, regular and

handsome in shape. Color very bright and showy; flesh very firm, and quality of the best. Succeeds well on all soils. I plant it largely as a fertilizer with Crescent and Lady Rusk, and consider it the best to plant with these varieties, more especially on account of earliness and being a strong bloomer. Dozen, 25c; 100, 50c; 1000, \$3 50.

GREAT PACIFIC (New) P.

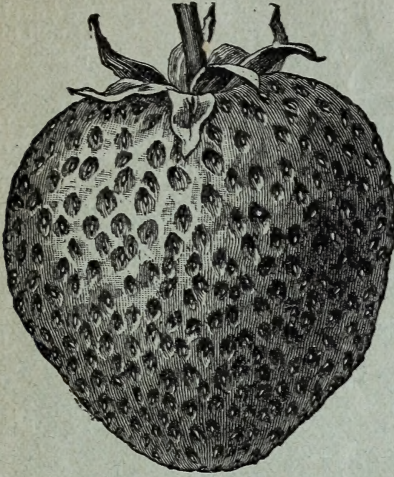

Originated in Illinois, and the originator claims it is the hardiest plant and greatest runner; grows very robust and strong; surpassed 35 other varieties on his experimental grounds in 1886 and 1887, both very dry and

trying seasons; is a heavy yielder; very large size, beautiful color and a No. 1 shipper, as the flesh is firm and solid. Its size the season through is equalled by few and surpassed by none. It is a pistillate. The fruit has been seen to lay around the plants in piles. It is a grand berry. Dozen, 25c; 100, 50c; 1000, \$3.50.

EUREKA (New) P.

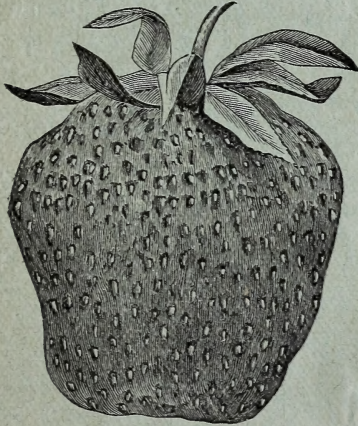

Plant vigorous, medium size, free runners, very prolific. Berries large, of good quality, firm and of good shape, medium to late in Pistillate flower, of easy culture, withstand-

ing drouth and heat admirably well, combining the desirable qualities of a profitable market berry. Dozen, 25c; 100, 75c; 1000, \$4.00.

MRS. CLEVELAND (New) P.

This berry was introduced for the first time in the spring of 1890. They have been on trial a number of years in most States, from Canada to Texas, and given excellent satisfaction. The following is what the originator says: "This plant was produced from seed grown about the middle of July, 1833. It denotes Cumberland parentage.

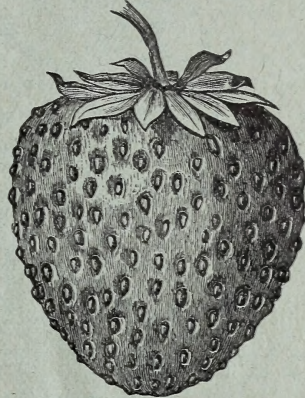

A mixture of several varieties was sown together, among which was Cumberland. It is a very large berry, vigorous, stocky, healthy plant; fruited the next June and every season since, bearing large, uniform berries of excellent shape and quality; color scarlet, and very attractive; pistillate blossom; withstands heat and drouth admirably well. It was exhibited at Montgomery Horticultural Society, Ohio, June 2, 1836, and reported as quite promising. Its intended name was Mrs. Garfield. Mr. N. H. Albaugh moved that, as there was a Mrs. Garfield strawberry, this seedling be named Mrs.

Cleveland (if it be not too previous) in honor of the estimable lady which the President weds this day." It originated with Mr. Geo. Townsend, of Darke County, Ohio, originator of the beautiful Eureka. The accompanying engraving does not really do the berry justice. Dozen, 25c; 100, 75c; 1000, \$5.00.

FLORENCE (Clara—New).

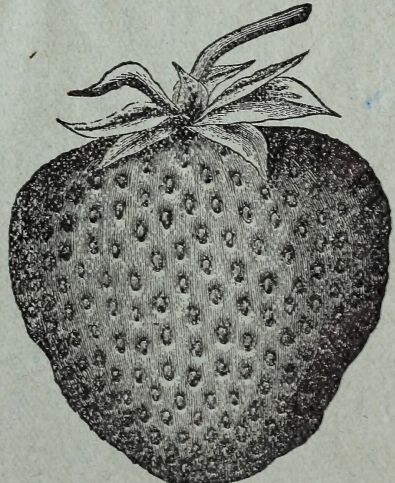

Originated in Cuyahoga County, Ohio. It is a beautiful bright red, resembling the Old Wilson in shape, but a brighter red, and holds its color well after being picked, aver-

aging half as large again. Its fruit is borne on large strong fruit trusses, holding the berries well up from the ground, keeping the berries clean. It is an excellent runner and good shipper, equaling the Old Wilson. Its beautiful, attractive appearance finds a ready sale, its season is medium to late with a perfect blossom. Dozen, 50c; 100, 75c; 1000, \$4.00.

CRAWFORD.

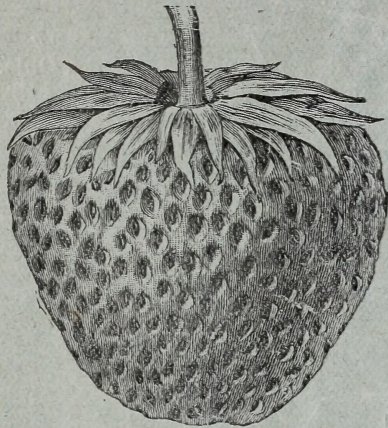

From Ohio. The originator thus describes it: "The plant is very large and stocky, dark green, and free from defects. It has a perfect berry and is a good bearer. The

fruit is large to very large, somewhat irregular at first but never coxcombed. Color bright, glossy red, and lighter within. The flesh is firm and of excellent quality." Dozen, 25c; 100, 75c; 1000, \$5.00.

MICHEL'S EARLY.

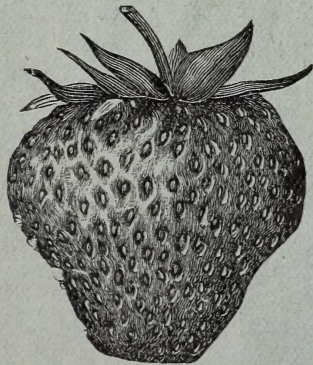

This is undoubtedly one of the most valuable of all strawberries, the past season having again demonstrated this fact. Originated in White County, Arkansas. Early and one of the largest and most prolific bearers. Its robust constitution makes it an iron-clad.

Resists drouth and frost perfectly, the foliage remaining green when all others dry or freeze down; is also free from rust and other defects; strong grower, making a wonderful amount of runners; foliage large, with perfect blossom, being so rich in pollen as to make it one of the best to fertilize all pistillate sorts, no matter how early or late they bloom, so while it is one of the earliest it also extends over a long period of bearing. Color a deep scarlet, with orange. This, coupled with its large size and earliness, makes it a profitable variety to grow. Every strawberry grower should plant some Michel's Early, either in rows of other staminate or pistillate, to catch the early blooms as a fertilizer for pistillate sorts. Dozen, 25c; 100, 50c; 1000, \$3.00.

CRESCENT (P).

This is beyond question a wonderful berry. Has yielded as high as 8,000 quarts per acre on my own field. In size it is medium to large; in color brilliant and handsome. The fruit colors on all sides at once, so that all

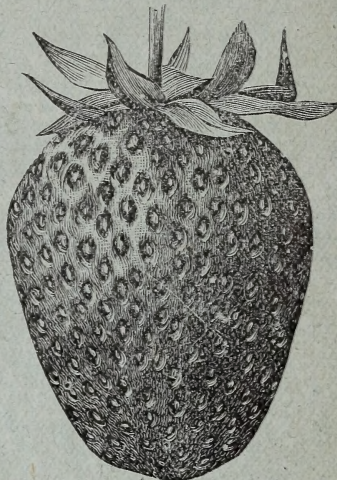

red berries may be gathered, a quality appreciated by all growers. It bears immense crops, even in weeds and grass. It is an "iron-clad" for the sun or rain, cold or heat. The great trouble with most growers is that they allow the Crescent to spread too much.

In order to produce best results the rows should not be allowed to get over twelve to fourteen inches wide, and then if the plants get too thick in the rows, take a hoe and hack out some of the plants, allowing each plant three inches of ground. By so doing you will get better fruit and more quarts to the acre. This rule also applies to all other varieties. Dozen, 25c; 100, 50c; 1000, \$2.50.

HAVERLAND (P).

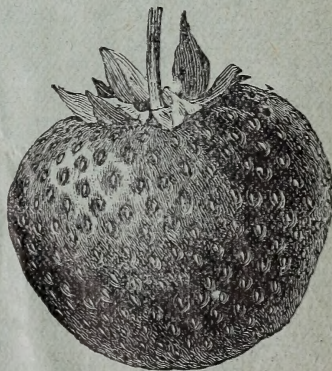

A new variety of great promise. It is highly praised by all who have grown it. Plant is a strong grower and entirely free from rust. Matthew Crawford, who is considered good authority on strawberries, says it sends out as many runners as the Crescent,

and the smallest plants bear abundantly. The fruit is of large size, many berries being two inches long. It ripens all over, and is a bright, glossy red. Is grown quite largely in Ohio, and well recommended as a heavy bearer of fine berries. I can fully endorse Mr. Crawford's description of the Haverland. It bore abundant crops on my own fields the past season. I expect to plant forty acres of them this spring, and advise all growers to give them a trial. Dozen, 25c; 100, 50c; 1000, \$3.50.

MINOR'S PROLIFIC.

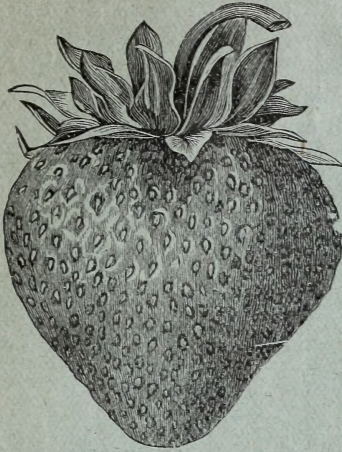

Somewhat similar to the Downing, but is

larger, darker in color, and its foliage does not burn. Heavy yielder, large size. Dozen, 25c; 100, 50c; 1000, \$3.50.

MONMOUTH.

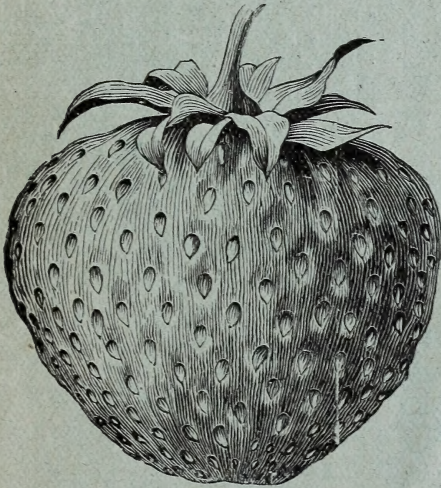

This is a strong growing plant. Fruit of large size and early, ripening as early as the

Crescent; of better size and quite productive. Dozen, 25; 100, 50c; 1000, \$3.50.

JESSIE.

This berry has fruited for me the past four seasons and find it to be all that the originator claimed for it. The plant is very vigorous and healthy, and a strong grower, resem-

bling the Sharpless. The fruit is large and holds its size well until the last picking, and is worthy of general planting. My plants were received direct from the originator and are pure and positively true to name. Price, 25c per dozen; 50c per 100; \$3.50 per 1000.

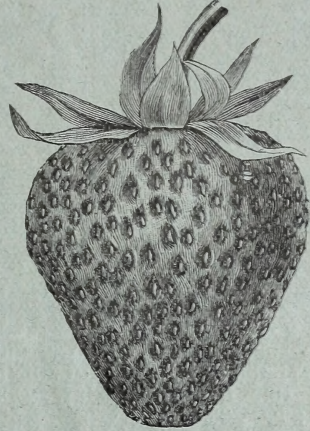

HART'S MINNESOTA

Has been thoroughly tested and pronounced by leading strawberry growers in this section as one of the best staminate varieties to fertilize the Crescent and other pistillate sorts of good size and fine quality. I have no electro of this berry, but should advise all strawberry growers to give it a trial. The price of plants is also very reasonable. I have faith in this berry and shall plant

largely of it myself this season. Dozen, 25c; 100, 50c; 1000, \$4.00.

WARFIELD (No. 2) P.

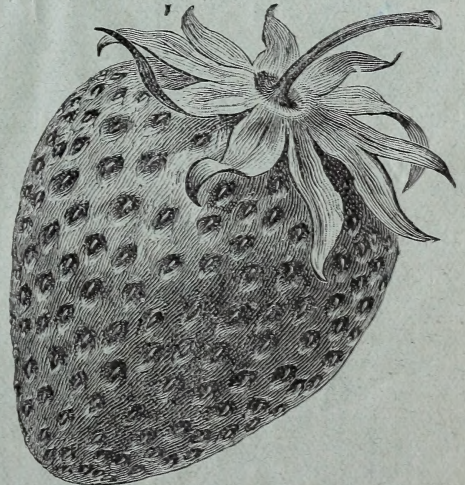

A variety that is very likely to supersede the Crescent, which it rivals in yield and excels in size, beauty and firmness. Plant is a vigorous grower of bright, healthy foliage.

The berries are very beautiful, regular, firm and abundant. These good qualities make it a universal favorite. I have good faith in this berry from what I learn of its behavior all over the country and the way it has acted on my own grounds. Dozen, 25c; 100, 50c; 1000, \$3.00.

LOVETT'S EARLY.

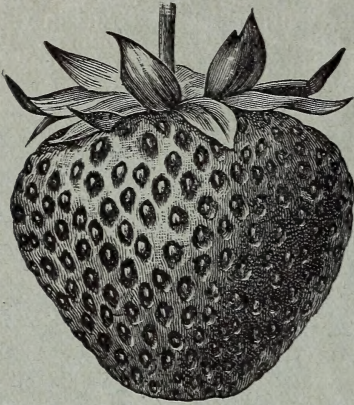

The Introducer describes this berry as follows: "The fruit is of the largest size, long and little shouldered, bright scarlet, with smooth surface and yellow seeds. In quality

it as good as Sharpless and stands shipping well. It colors all over at the same time, as early as the earliest with a perfect blossom. For vigor, hardiness and productiveness it surpasses other varieties; originated in Kentucky." The originator claims it as heavy yielder as the Crescent and berries twice as large in size. Price, dozen, 25c; 100, 75c; 1000, \$5.00.

MANCHESTER, P.

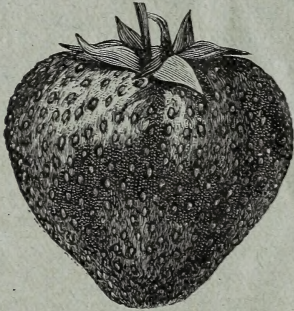

One of the best late berries for home use and profitable for market in many sections. Succeeds admirably on light sandy soil.

The plant is a strong grower and exceedingly productive. Fruit large, uniform in size and shape, and of good quality and moderately firm. Late to very late. Dozen, 25c; 100, 50c; 1000, \$3.50.

WILSON.

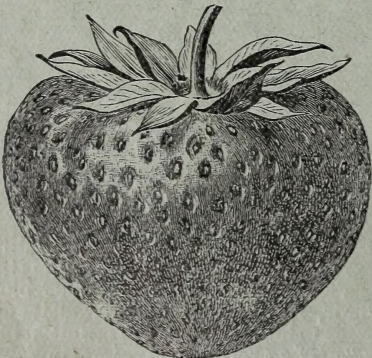

Medium to large, very hardy. Vigorous

and productive in some localities. Dozen, 25c; 100, 50c; 1000, \$3.00.

WINDSOR CHIEF (P).

Introduced from Michigan in 1880 as a seedling from the Champion, fertilized by

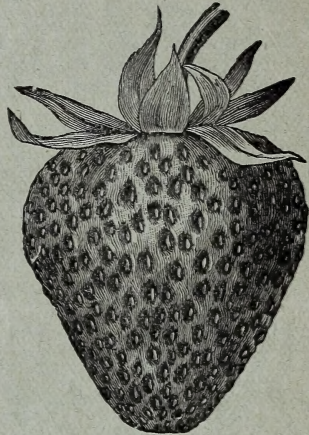

the Downing. It appears to combine many of the good qualities of each. Vigorous,

healthy plant, enormously productive, berries large to very large, rich dark red color, very acid till fully ripe; one of the most profitable market varieties, and if allowed to ripen on the vines, it is one of the richest table berries. Dozen, 25c; 100, 50c; 1000, \$3.50.

CLOUD SEEDLING (P.)

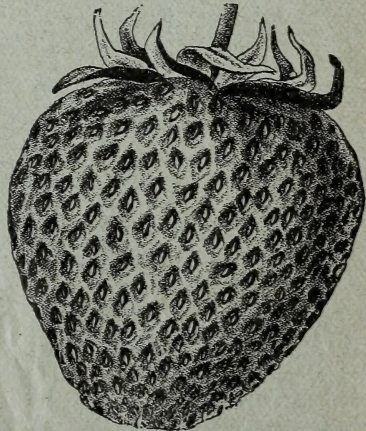

This berry has forced itself into favor wherever known, without advertising. It created quite a sensation at the meeting of

the American Horticultural Society in 1883. One of the earliest to ripen; good quality, great beauty of color and regularity of form; vigorous and productive, and worthy of trial in all sections of the country. Dozen, 25c; 100, 50c; 1000, \$3.00.

CUMBERLAND.

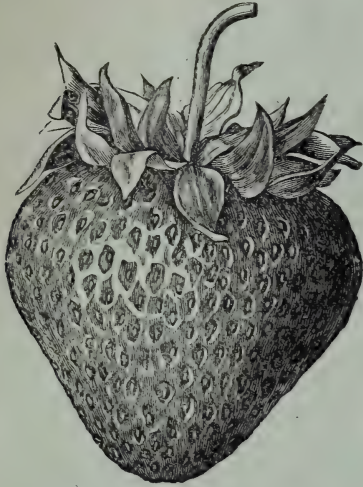

A very fine berry in all respects, of very large size, fine form, beautiful color and excellent quality, and is growing in general favor. No one ever regrets planting it; does

well everywhere. The plant is remarkably strong and luxurious, stands extremes of heat and cold, and is not injured by drouth, as most other varieties; produces abundantly. Berries extra large; no small ones. Ovate, conical in shape. Color bright scarlet, a decidedly handsome berry. It is one of the few berries on the list that do equally well on all soils. Dozen, 25c; 100, 50c; 1000, \$3.50.

GANDY.

A large, late berry. firm and good. This is probably the best of the late berries, with many good points to its credit already, and has not yet had a full test. The plant is of

the most sturdy character, and it will produce quite a crop the first season if the blossoms are allowed to mature. This will not in any way hinder the growth of the young plants or prevent its yielding a full crop the ensuing year. Dozen, 25c; 100, 50c; 1000, \$3.50.

BUBACH (No. 5) P.

Originated in this State. This berry combines great and uniform size, fine color and form, with unsurpassed productiveness and good quality of fruit, with equal vigor, stockiness and hardiness of plant. The

leaves are very large and of a very dark green color, and the hottest sun does not appear to affect them. Appear to carry every blossom to a perfect berry, and color and ripen at both ends at once. In vigor of plant and yield of fruit it is wonderful, even under careless culture. The berry is inclined to be a little soft for shipment, but for home market it is worthy of trial. Dozen, 25c; 100, 50c; 1000, \$3.50.

SUCKER STATE.

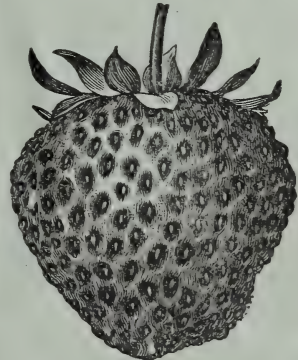

One of the best. A very rank growing plant. A little late in ripening, but of ex-

cellent quality. Heavy yielder. Dozen, 25c; 100, 50c; 1000, \$3.00.

JAMES VICK.

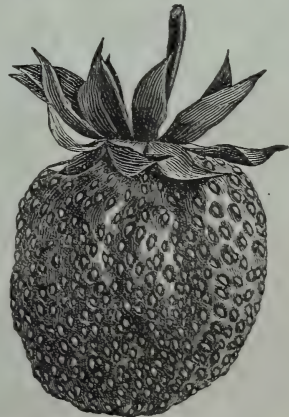

A strong, rank grower, healthy and productive; extremely hardy. It is wonder-

fully prolific, but should be planted on good, heavy ground to do its best. Fruit of good quality. Dozen, 25c; 100, 50c; 1000, \$3.00.

PINEAPPLE.

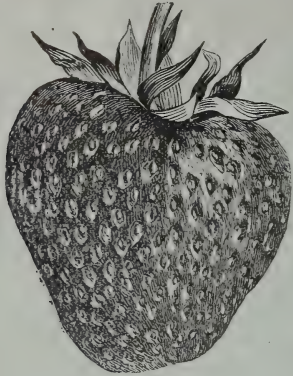

Of vigorous growth, free from rust, late,

quality good. Price, dozen, 25c; 100, 50c; 1000, \$3.50.

MAY KING.

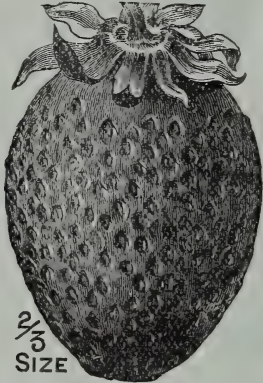

This is a new sort originated in New Jersey, grown from Crescent seed and earlier than that sort, which alone makes it ex-

tremely valuable. The vine is very vigorous and healthy and fruit of large size, bright scarlet, and of very best quality. Dozen, 25c; 100, 50c; 1000, \$3.50.

BELMONT.

This is a very showy berry when fully ripe. Dark crimson, glossy and of exceed-

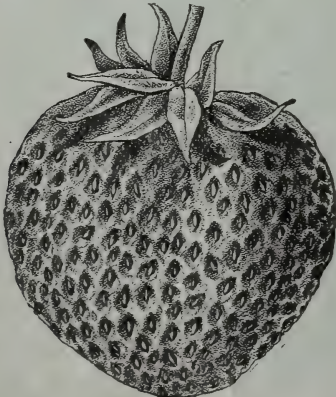

$\frac{2}{3}$
SIZE

ingly high quality. Requires good soil and culture to do its best. Dozen, 25c; 100, 50c; 1000, \$3.50.

CAPT. JACK.

Immense yielder; fruit medium to large

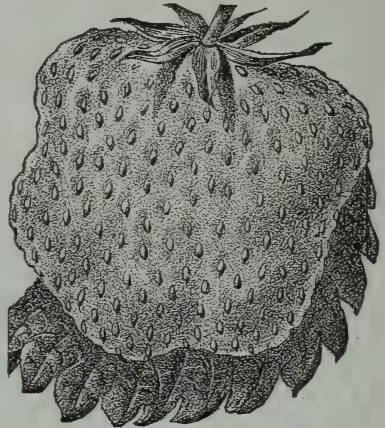

and of good flavor. Similar to the Wilson, but better flavored. It is a strong and lux-

uriant grower, healthy and productive. The berries are large, handsome and solid, somewhat resembling the Wilson, of which it is said to be a seedling, but of better quality. Dozen, 25c; 100, 50c; 1000, \$3.50.

OLD IRON CLAD.

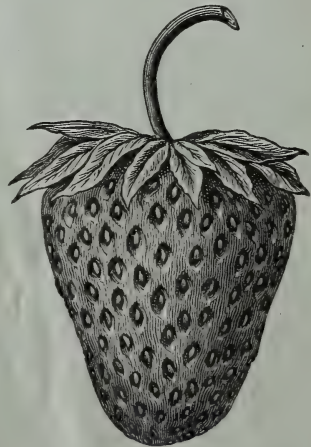

The plants are very vigorous, more so than the Sharpless. The fruit resembles the Sharpless greatly in size and shape. It

is light scarlet, but not so dark or deep as the Wilson. It is several days earlier than the Wilson. Blossoms perfect. The berries carry well, much better than the Wilson. It stands the drouth perfectly and is very healthy. Price, 25c per dozen; 50c per 100; \$3.50 per 1000.

HOFFMAN SEEDLING.

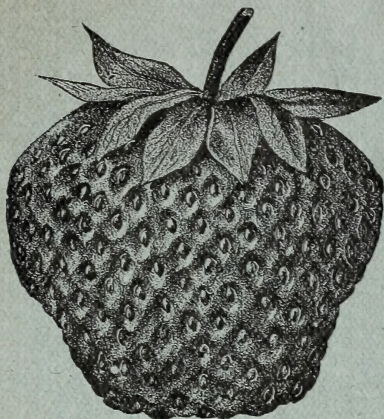

This is taking the place of the old Neuman's Prolific in the South for shipments to Northern markets, and is regarded by many

as the most profitable berry for Southern growers. Of vigorous growth, makes many runners, fruit large and showy, firm, subacid. A good shipping berry. Season early. Dozen, 25c; 100, 50c; 1000, \$3.00.

SHARPLESS.

Fruit large to very large, an average specimen measuring one and one-half inches in diameter. In form it is generally oblong,

narrowing to the apex, and irregular and flattened. Color clear, bright red, with a shining surface. Flesh firm and sweet. The plant is very vigorous. Dozen, 25c; 100, 50c; 1000, \$3.50.

MARLBORO RASPBERRY.

The Marlboro has proved to be the hardiest, earliest and one of the best carrying red varieties known. Fruit is larger than Cuth-

bert, stouter cane, brighter red in color, more firm and hardy. Fruit very large, roundish, conical, very productive. Suckers freely. Season very early, extending to medium. Originated in New York State. The largest early Red Raspberry yet introduced, without a doubt. Dozen plants, 50c; 100, \$1.50; 1000, \$9.00.

**EARLY HARVEST BLACKBERRY.**

One of the earliest known blackberries, and consequently one of the most valuable. Ripening the 4th of July, with its very attractive appearance, firmness and exceeding productiveness, renders it eminently profitable to market; while its earliness and good quality makes it a special favorite in the home garden. The statement has been made by some that this variety is not hardy, and find it explained by the fact of Brunton's Early having been sent out in many instances by unscrupulous parties for it. Dozen, 50c; 100, \$1.50; 1000, \$9.00.

Packing Free.—No charge for packing, boxing or drayage, as is customary with most nurserymen. I desire to call attention to this fact—everything delivered to depot free of charge.

Description of Varieties.—Having so many varieties, space in Catalogue will not admit giving description of each variety. Those wanting same can get them by writing for them; besides, parties purchasing trees, as a usual thing, know what they are from name.

My Fruit Trees, as well as vines and plants, are first-class in every respect. Varieties are warranted to be positively true to name, with the express understanding that should any not prove so, I will return the money paid as gracefully as I received it, or replace with other stock.

Large Orders.—To parties desiring to plant largely special prices will be made on trees, vines, etc. Send in a list of your wants, stating grade, quantity, varieties, etc., wanted, and the lowest possible prices will be quoted on same.

STANDARD APPLES.

Extra first-class, 6 to 7 feet.....	20c each	\$2.00 per dozen	\$12.00 per 100

Mr. Stahl. WEST NORTHFIELD, MASS.
 Dear Sir: I received my bundle of nursery stock in good order this morning. Your superior way of packing saved the trees and plants from drying up. They seemed to be as fresh as when packed.
 Respectfully yours, B. F. CAMPBELL.

William Stahl. OQUAWKA, ILL.
 Dear Sir: I received the trees all O. K. Am well pleased with them.
 Yours truly, H. C. BAILEY.

Wm. Stahl. ARKANSAS CITY, KANSAS.
 Dear Sir: The plants bought of you were received on the 2d, all in good shape, and are satisfactory in every respect.
 Very respectfully yours, PETER BEECHER.
